

Web2py Mini Project – **iLife App**

Objective :

An app to journal one's personal life.

Modules to Implement :

1. Account creation

Every user interested to maintain his/her personal journal needs to create an account with the app.

2. Update Journal -

a. Writeups -

Add new entries to journal on the basis of calendar day.

User can write travelogue & life event entries.

b. Adding photos & videos -

Browse through files to pick photos and videos related to a particular date or event.

3. Display Timeline -

a. Search Events -

Based on date of event, people tagged, occasions.

b. Printing -

Print the journal entries from the app.

4. Events -

a. Create/Delete event -

User can create his own events like birthdays, hangouts, occasions etc. and can turn on/off the event alert for them

b. Event Alerts -

Daily email notifications to help user remember to write in the journal, birthday reminders
